Can Data Explain Business Performance?

Sales & Marketing Analytics

MySQL + Power BI

By Anand Shelake

NMD Infotech, Pune | OJT Project

From enquiry records to business insights

Start With Business Questions

RAW DATA

Enquiry logs

Source information

Service details

Admission records

Fee transactions

BUSINESS QUESTIONS

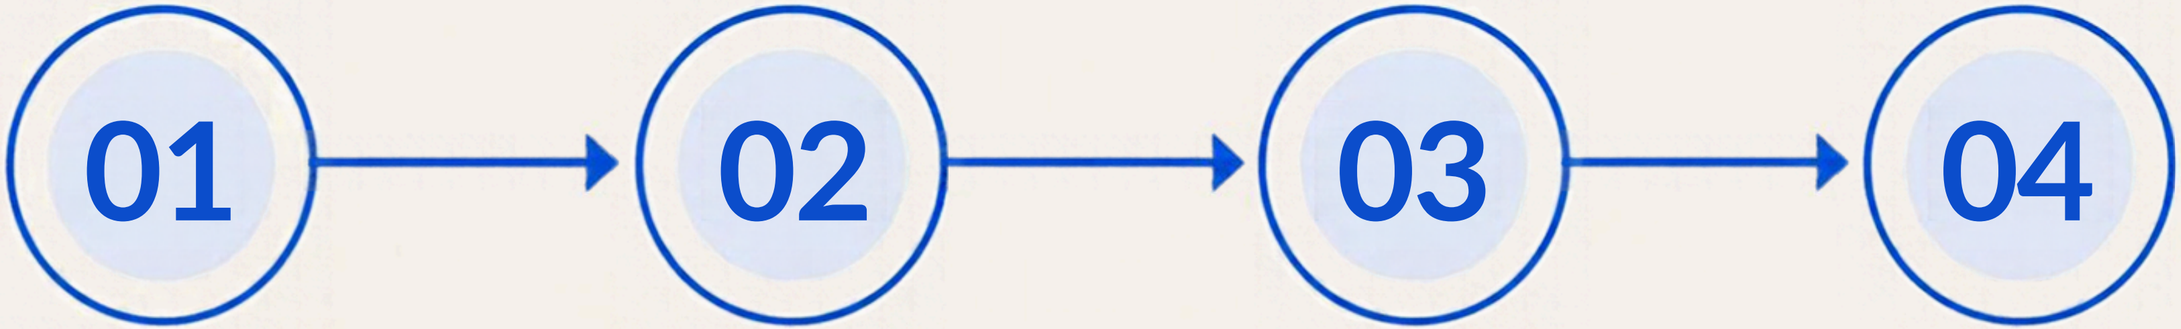

Are enquiries **converting** into admissions?

Which **sources** contribute to enquiries and admissions?

Which **services** drive admissions and revenue?

What does the **fee collection** picture look like?

Build the Analysis Pipeline

Prepare and validate data

Clean, standardize, and ensure data quality.

Connect enquiry and admission records

Link datasets using STUD_ID for unified analysis.

Analyze with MySQL

Query, aggregate, and extract insights from your data.

Visualize KPIs in Power BI

Turn insights into clear, actionable dashboards.

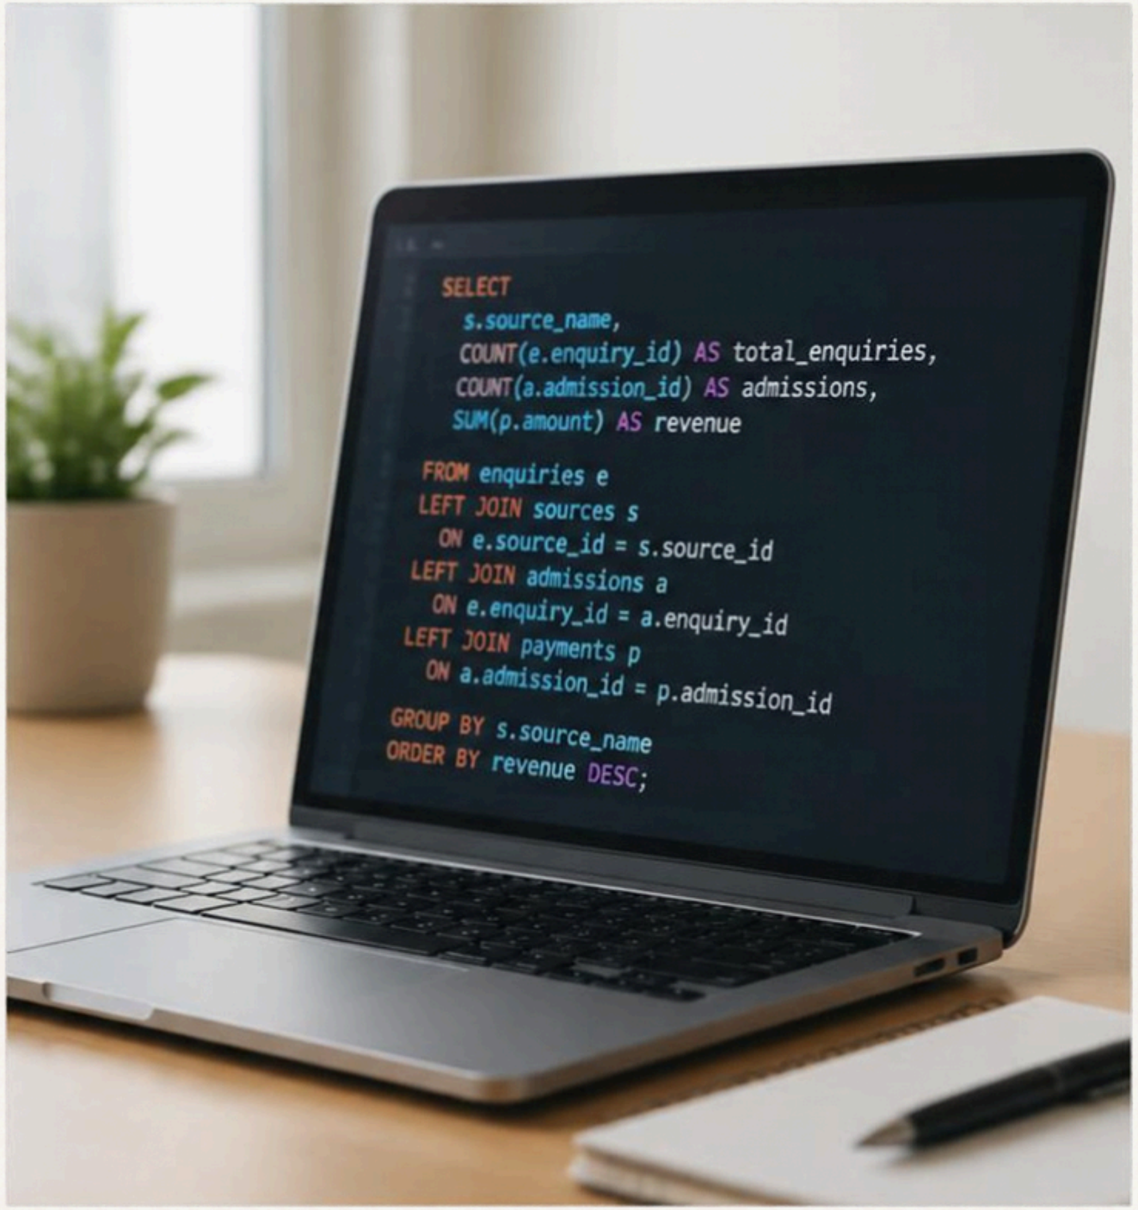

SQL Turns Tables Into Answers

01 **JOINS**
connect related records

02 **GROUP BY + aggregates**
compare sources and services

03 **LEFT JOIN**
identify unconverted enquiries

04 **Date queries**
review monthly trends

The Numbers at a Glance

1,111

enquiries

658

admissions

59.2%

approximate conversion

conversion = admissions / enquiries

calculated as 658 ÷ 1,111 × 100

From Findings to Actions

01

Follow up with enquiries that have not converted

02

Compare channels by admissions and revenue, not leads alone

03

Monitor pending fees and payment status

04

Use monthly trends to plan campaigns and resources

A Case Study, A Skill Set

The goal: turn business data into clearer decisions
