EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

During my internship at **NMD Infotech, Pune**, I had the opportunity to work on a project titled *"A Study of Data-Driven Insights on Sales & Marketing through MYSQL & Power BI Visualization at NMD Infotech, Pune"* The purpose of this project was to use real company data to understand how enquiries are generated, how they get converted into admissions and what these trends reveal about the company's sales and marketing performance.

The dataset provided by NMD Infotech included two main sections: **Enquiries** (students who showed interest in various courses such as App Development, Game Development, etc.) and **Admissions** (students who actually enrolled). Along with this, the data also captured important details such as location, gender, source of enquiry (Google, Instagram, referrals, etc.) and financial information like total fees and installments**.**

By analysing this data, I was able to identify:

- Which courses are in higher demand among students.
- The districts and demographics contributing most to enquiries and admissions.
- The marketing channels (like Google or Instagram) that bring in the maximum students.
- The overall conversion rate from enquiry to admission.
- How revenue flows in through fees and installment payments.

Using Power BI, I created interactive dashboards that converted this raw data into meaningful visuals. These dashboards made it easy to see patterns and trends at a glance for example, which services were performing well, which marketing strategies were effective and how financial collections were happening.

This project showed me the real power of data-driven decision-making. The insights generated can help NMD Infotech design better marketing strategies, improve student conversion rates, and plan finances more effectively. More importantly, it taught me how data can tell a story about how a business is growing and where it needs to focus.

In short, this project was not just about numbers and charts, it was about connecting data to real business outcomes and helping NMD Infotech move towards smarter, evidence-based decisions.

ORGANIZATION PROFILE

ORGANIZATION PROFILE

1. INTRODUCTION

NMD Infotech Pune, based in Pune, is a growing IT services and business consulting company. It specializes in customized digital solutions for businesses across different industries. The company focuses on technology-driven growth, blending creativity and innovation with practical business strategies.

With its head office located on Fergusson College Road, Shivajinagar, Pune, NMD Infotech has established itself as a reliable partner for businesses looking to expand their digital presence, strengthen operations and use data to make better decisions.

2. HISTORICAL BACKGROUND OF THE COMPANY

NMD Infotech was started with a vision of bridging the gap between business challenges and digital solutions. Over the years, the company has diversified its services from software development to data science, cloud computing, digital marketing and IT consulting.

Its journey reflects a strong belief in innovation, adaptability and client-centric strategies. Today, NMD Infotech works with a variety of clients, from startups to established companies, and continues to expand its reach in both national and international markets.

3. COMPANY PROFILE

- **Company Name**: NMD Infotech, Pune.
- **Industry**: Information Technology and Business Consulting
- **Head Office**: Office No. 202, Mantri House, Fergusson College Road, Shivajinagar, Pune – 411005
- **Team Strength**: 30 professionals including analysts, developers and consultants
- **Client Base**: Corporate businesses, education sector, real estate and startups

4. VISION

"To be a trusted partner for businesses by delivering innovative, reliable and future-ready IT and consulting solutions that help organizations grow in the digital age."**5.**

5. MISSION

- To provide custom-made solutions that meet client requirements instead of generic models.
- To maintain quality, reliability and transparency in every project.
- To empower businesses with data-driven decision-making and digital transformation.
- To constantly innovate and stay ahead with emerging technologies.

6. OBJECTIVES

- To deliver end-to-end IT and business solutions under one roof.
- To help businesses achieve growth through data analytics and digital marketing.
- To support clients in achieving operational efficiency using IT consulting and automation.
- To build long-term client relationships through trust and consistent performance.

7. ACHIEVEMENTS

- Successfully delivered projects in app development, game design and digital marketing.
- Developed data science and analytics models to help clients gain insights from raw data.
- Worked with reputed clients such as Tech Mahindra, RBL Bank and various educational institutions.
- Established itself as a trusted digital partner for businesses across Pune and beyond.

8. MANPOWER SCENARIO

NMD Infotech has a small but skilled workforce of around 30 employees, including:

- Developers & Engineers (App/Game/Web development)
- Data Analysts & Data Scientists
- Digital Marketing Specialists
- Business Consultants & Project Managers

The team structure is lean, which allows for flexibility, faster decision-making and close collaboration with clients.

9. FINANCIAL SCENARIO

While detailed financial data is confidential, NMD Infotech has shown steady growth in revenue by expanding its service offerings into multiple areas like app development, data analytics and marketing. The company follows a service-based revenue model and is financially stable, focusing on sustainable growth rather than short-term gains.

10. SERVICES / PRODUCTS OF THE COMPANY

NMD Infotech offers a wide range of services (its "products" in business terms):

- **App Development** – Android, iOS and cross-platform apps
- **Game Development** – immersive, engaging games for multiple platforms
- **Data Science & Data Analytics** – machine learning, predictive modelling, BI dashboards
- **Digital Marketing** – SEO, social media campaigns, corporate advertising
- **Business Consulting & IT Consulting** – strategy, digital transformation, infrastructure optimization
- **Cloud Computing Solutions** – storage, hosting and data management
- **Business Development Support** – growth strategies, branding, client acquisition

This flat structure ensures smooth communication, innovation and quick execution of projects.

OUTLINE OF THE PROBLEM

OUTLINE OF THE PROBLEM

During my internship at NMD Infotech Services, Pune, I worked closely worked through tools like excel, Power BI, SQL. NMD Infotech provides a wide range of services such as App Development, Game Development, Data Science, Cloud Computing and Digital Marketing. With so many services and a growing number of students showing interest, the company collects a lot of enquiries and admissions data.

The main challenge was that although the company had this data, it wasn't being fully utilized to gain clear insights. For example:

- Which services are most popular among students?
- Which marketing channels, like Google, Instagram or referrals are bringing the most leads?
- How many enquiries are actually getting converted into admissions?
- What does the revenue flow look like in terms of fees and installments?

Without proper dashboards, it was difficult for the management to get quick answers to these questions and take timely decisions.

PROJECT TITLE & OBJECTIVES

PROJECT TITLE & OBJECTIVES

PROJECT TITLE:

"A Study of Data-Driven Insights on Sales & Marketing through MYSQL & Power BI Visualization at NMD Infotech, Pune"

ABOUT THE TITLE

This project is based on the work I did during my internship at NMD Infotech, Pune. The company provided me with its sales and marketing data and my task was to analyse this information and create Power BI dashboards. The goal was to turn raw data into useful insights that could help the management understand their enquiries, admissions and revenue patterns more clearly.

OBJECTIVES OF THE PROJECT

The main objectives of this project were:

1. **To analyse enquiry trends**
- Understand which services/courses (App Development, Game Development, etc.) attract the most interest.
- Study enquiry patterns across districts, gender and time periods.
2. **To evaluate marketing effectiveness**
- Identify the major sources of enquiries (Google, Instagram, referrals, etc.).
- Measure which channels generate the highest admissions and conversions.
3. **To study conversion rates**
- Compare the number of enquiries with actual admissions.
- Identify the factors influencing higher or lower conversion.
4. **To assess revenue generation**
- Analyse total fees collected and installment payment patterns.
- Measure revenue contribution of different services.
5. **To build Power BI dashboards**
- Transform raw sales and marketing data into meaningful, interactive visualizations.
- Provide the management with real-time insights for quicker and better decisions.

6. **To recommend strategies for improvement**

- Suggest data-driven ways to enhance lead generation and admissions.
- Highlight potential areas for optimizing marketing campaigns and financial planning.

RESEARCH METHODOLOGY

RESEARCH METHODOLOGY

For this project, I followed a step-by-step approach to understand the sales and marketing data of NMD Infotech, Pune and to present it in a way that could help the company make better decisions. The main focus was to take raw data and convert it into clear insights using **Power BI dashboards**.

1. RESEARCH DESIGN

The project was more of an analytical study. Instead of just collecting information, I focused on analysing the company's existing data to find out:

- Which services were more popular.
- How enquiries were turning into admissions.
- Which marketing channels worked best.
- How much revenue was being collected through fees and installments.

2. DATA SOURCES

The company provided me with two datasets, that's why this was the secondary data.

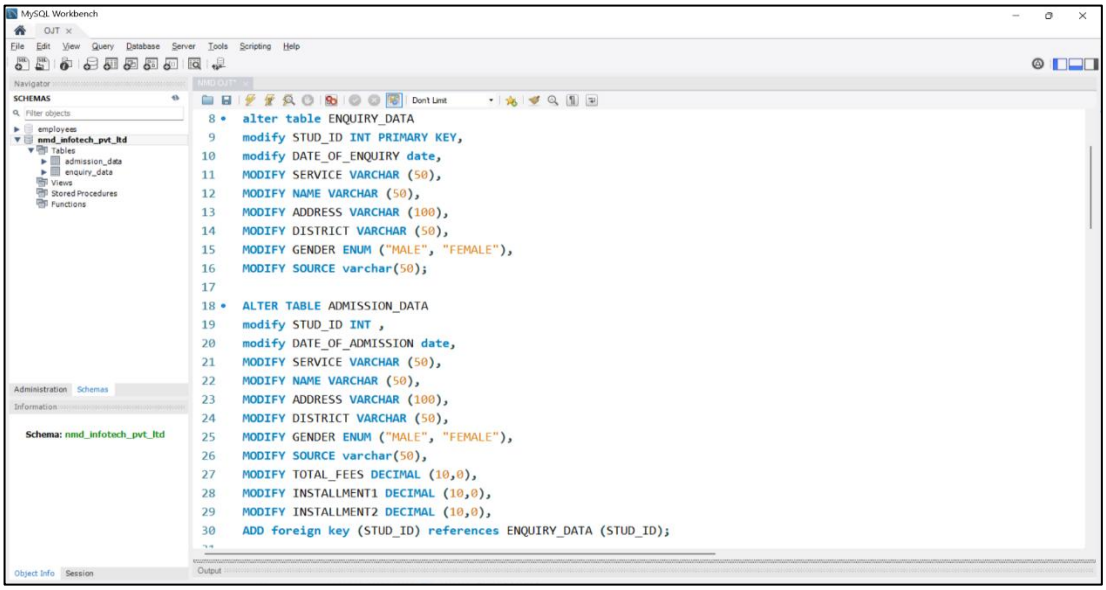

- **Enquiry Data** – students who showed interest in services, with details like name, district, gender, service and source of enquiry (Google, Instagram, etc.).
- **Admission Data** – students who actually enrolled, along with details such as admission date, service taken, total fees and installment payments.

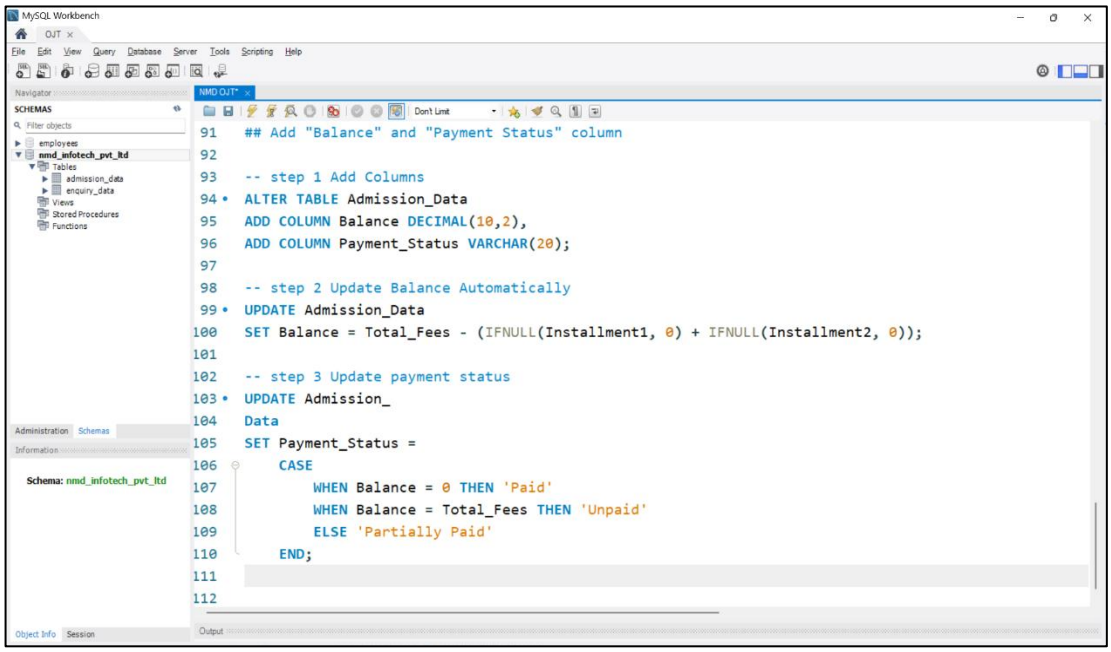

This data was directly linked to the company's sales and marketing activities, so it was the perfect base for my analysis.

3. DATA PREPARATION

Before starting the analysis, I had to clean and prepare the data. This included:

- Removing duplicates and fixing missing or incomplete details.
- All data converted into table named as Enquiry Table and Admission Table.
- Converted all columns with their matching datatypes, e.g. Datatype of “Date” column converted into DATE datatype as well as datatype of “Fees” column converted into “Currency” datatype.

- Adding “Balance” and “Payment Status” columns in ‘Admission_data’ set.

- Linking enquiry data with admission data to track conversions.

4. TOOLS USED

During the internship, I got hands-on practice with:

- **Excel** – for initial cleaning and quick summaries.
- **SQL** – for pulling and filtering structured data.
- **Power BI** – for building dashboards and visualizing insights.

5. DATA ANALYSIS

I studied the data to answer some important business questions:

- Which services had the most enquiries and admissions?
- From which districts and demographics were students coming?
- Which marketing platforms (Google, Instagram, referrals, etc.) gave the best results?
- How many enquiries actually converted into admissions?
- What did the revenue flow look like in terms of total fees and installments?

6. DASHBOARD DEVELOPMENT

I created **interactive Power BI dashboards** that showed:

- Service-wise demand and popularity.
- Enquiries vs admissions comparison.
- Marketing channel performance.
- Revenue details through fees and installment collections.

These dashboards helped turn complicated data into simple visuals that management could understand at a glance.

7. INSIGHTS AND RECOMMENDATIONS

In the final step, I shared my findings with the company. The insights helped them see:

- Which services should be promoted more.
- Which marketing channels were worth investing in.

- How enquiry handling could be improved to increase admissions.
- How to keep better track of fee collections.

DATA ANALYSIS

DATA ANALYSIS

1. DATA ANALYSIS THROUGH MYSQL

i) DATA DISCRIPTION:

Enquiry Data sheet

Column Name	Description
STUD_ID	Unique identifier for each enquiry. Must match with the admission STUD_ID if the enquiry converts.
DATE OF ENQUIRY	Date when the enquiry was made.
SERVICE	Course/service the student is enquiring about. Keep consistent naming across records.
NAME	Full name of the student. No digits or special characters.
ADDRESS	Full postal address. Optional but preferred.
DISTRICT	District or city from which the enquiry originates. Used for regional analysis.
GENDER	Gender of the student. Use consistent values.
SOURCE	Source through which the enquiry came. Helps analyze marketing effectiveness.

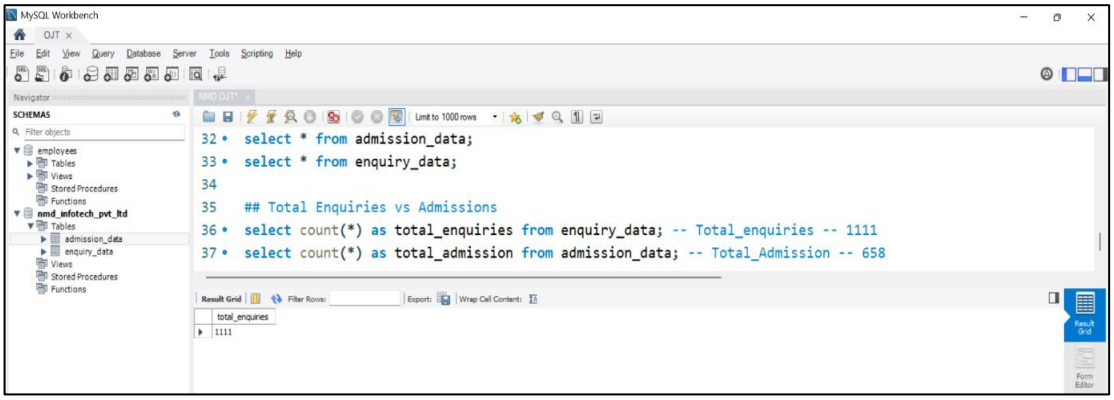

Admission Data Sheet

Column Name	Description
STUD_ID	Should match the STUD_ID from enquiry if converted. Must be unique in this table.
DATE OF ADMISSION	Date when the student took admission.
SERVICE	Course/service taken. Should match with enquiry if it was based on an enquiry.

NAME	Same as in enquiry, can be revalidated.
ADDRESS	Same as in enquiry, can be updated if needed.
DISTRICT	Can be same or updated. Used in geographical trend analysis.
GENDER	Same values as enquiry.
SOURCE	Important for marketing ROI analysis.
TOTAL_FEES	Total course fee. Must be a number (no ₹ symbol).
INSTALLMENT1	First installment paid. Used to calculate dues and collection status.
INSTALLMENT2	Second installment paid (if any).

ii) SQL QUERIES FOR ANALYSIS

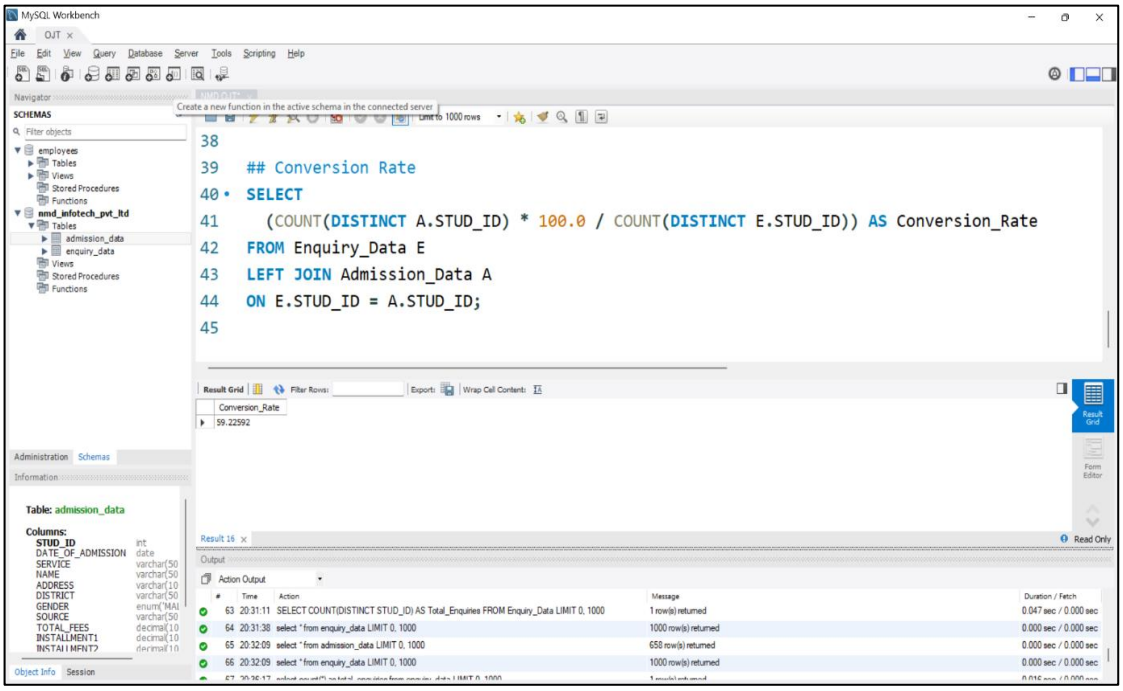

IMAGE NO. 1 Total Enquiries vs Admissions

INTERPRETATION:

A large number of students enquired about courses, but only a smaller portion actually took admission. This shows that while marketing efforts are successful in generating interest, the conversion into admissions needs improvement through better counselling and follow-ups.

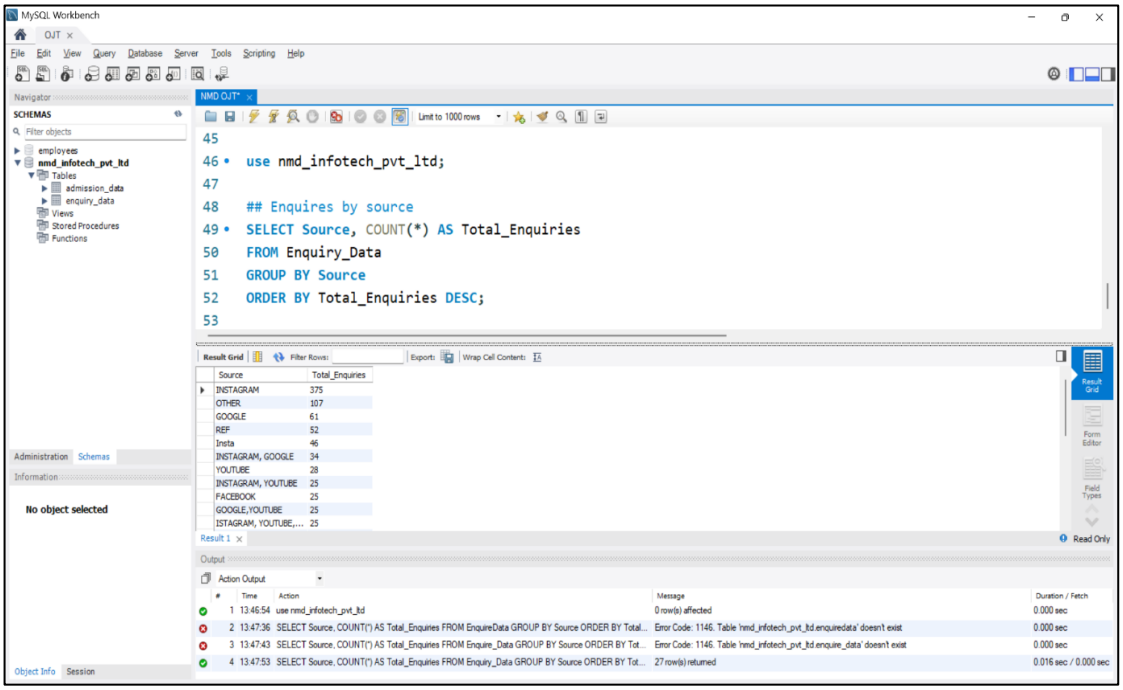

IMAGE NO. 2 Conversion Rate

INTERPRETATION:

The conversion rate indicates how efficiently enquiries are turning into admissions. A moderate percentage means that the company is doing well but still losing potential students. Focusing on enquiry handling, personalized communication, and timely follow-ups can improve this rate.

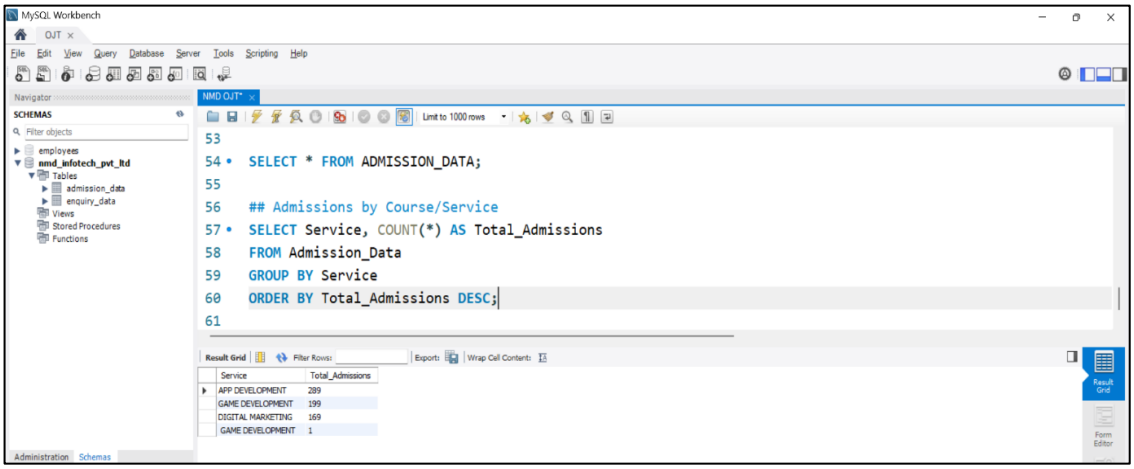

IMAGE NO. 3 Enquiries by source (Marketing Channels)

INTERPRETATION:

This analysis tells us which marketing platforms (Google, Instagram, referrals, etc.) brought in the most enquiries and which ones gave the best admissions. It allows the company to evaluate the ROI of marketing campaigns and decide which sources deserve more investment.

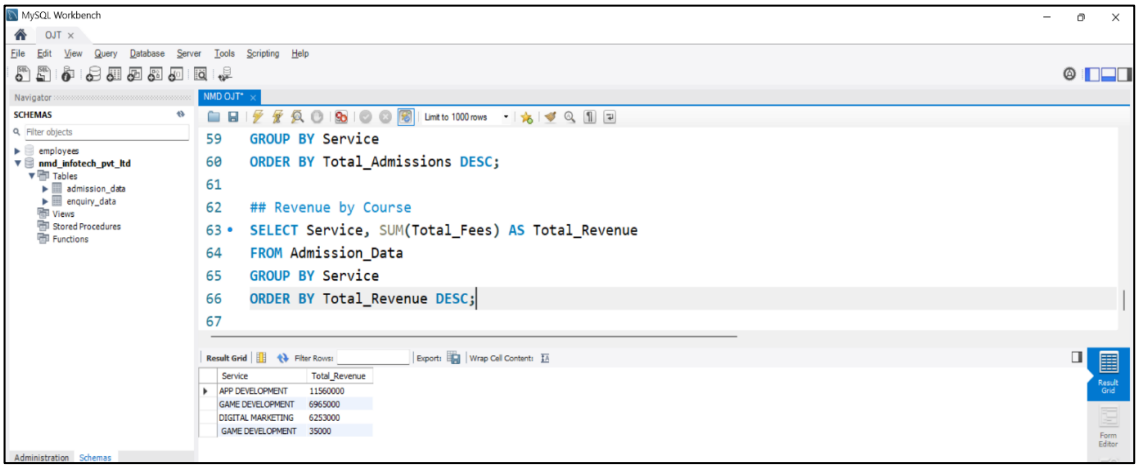

IMAGE NO. 4 Admissions by Course/Service

INTERPRETATION:

Some courses attract more admissions than others. Technical courses such as App Development and Data Science have higher admissions, showing strong demand in the market. Other courses may need more promotion to reach students.

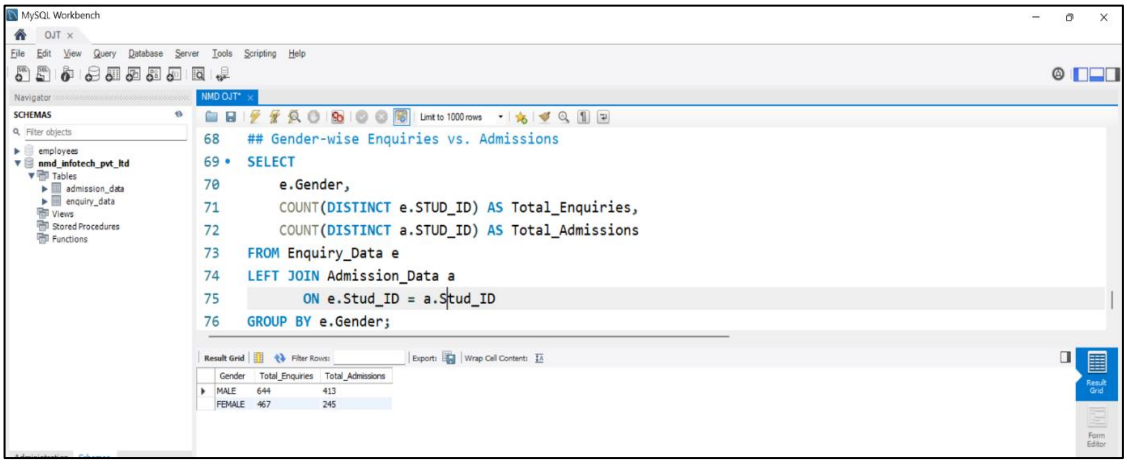

IMAGE NO. 5 Revenue by Course

INTERPRETATION:

Not all popular courses bring the same revenue. Some courses generate more income even if fewer students enroll, because of higher fees. This shows the company which courses are financially most valuable.

IMAGE NO: 6 Gender wise Enquires vs Admission

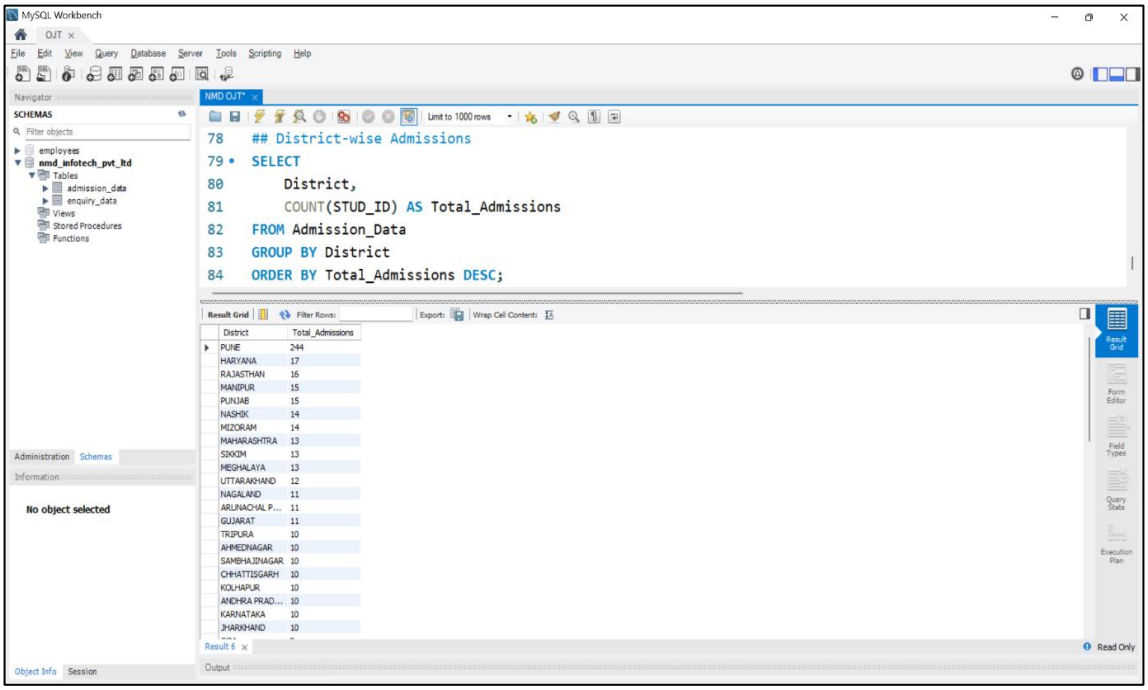

INTERPRETATION:

The analysis shows how many males and females enquired and how many actually joined. If there is a gap, the company could focus on targeted marketing campaigns to balance participation.

Gender	Total_Enquires	Total_Admission
Male	644	413
Female	467	245

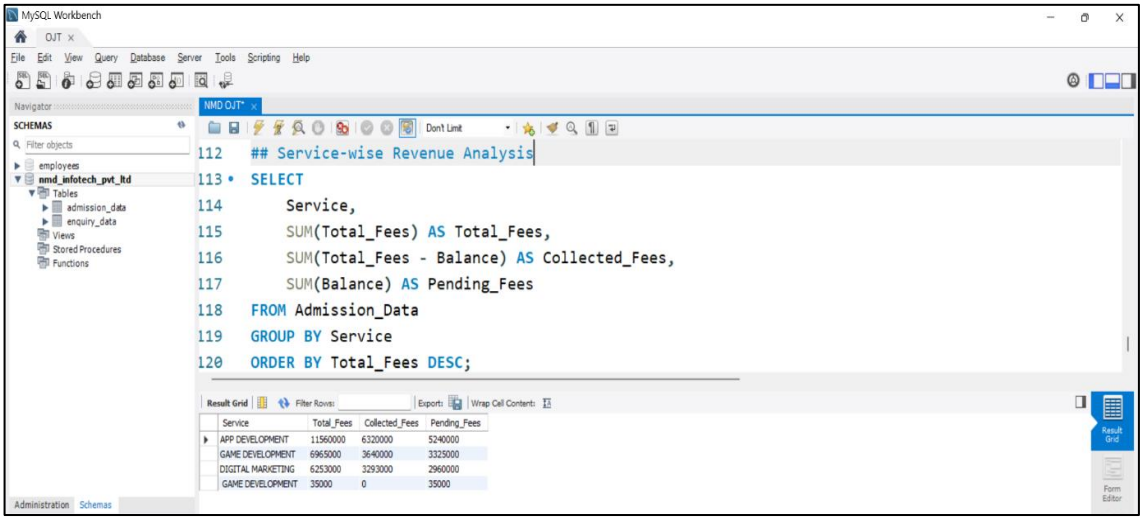

IMAGE NO. 7 District-wise Admissions

INTERPRETATION:

Most admissions are from Pune, which is expected as the company is based there. However, interest from nearby districts also exists, showing potential for regional marketing and expansion.

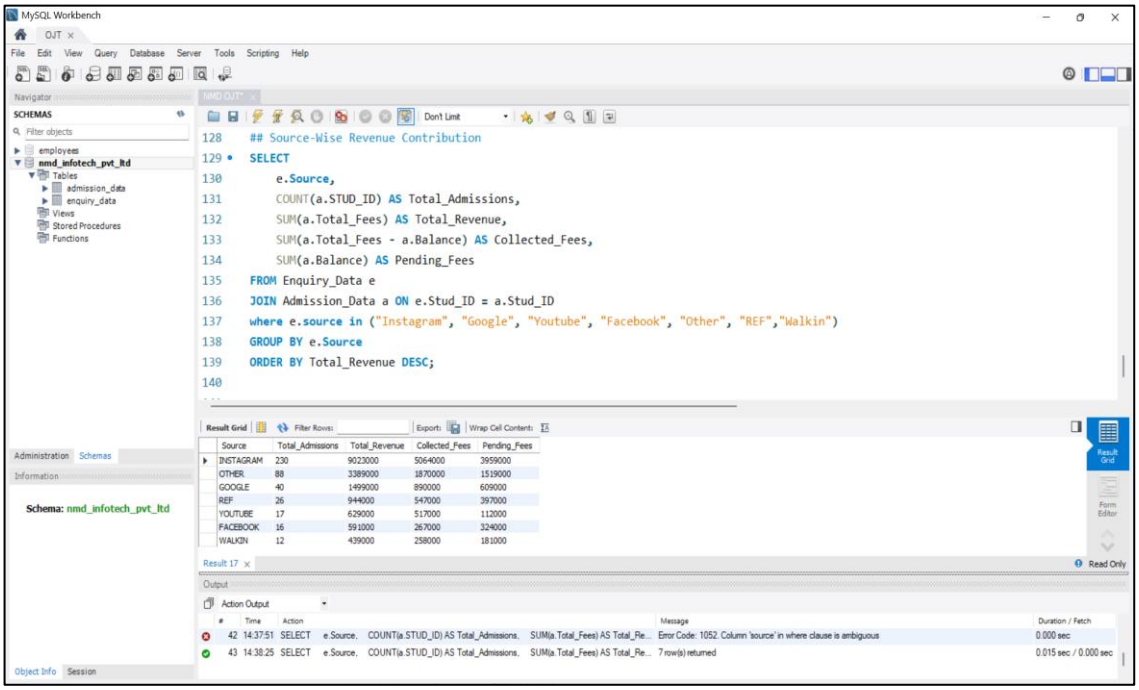

IMAGE NO. 8 Service-wise Revenue Analysis

INTERPRETATION:

Some services bring higher revenue collections while others have large pending balances. Services with high pending balances may require stricter fee collection strategies, while well-performing services show good financial health.

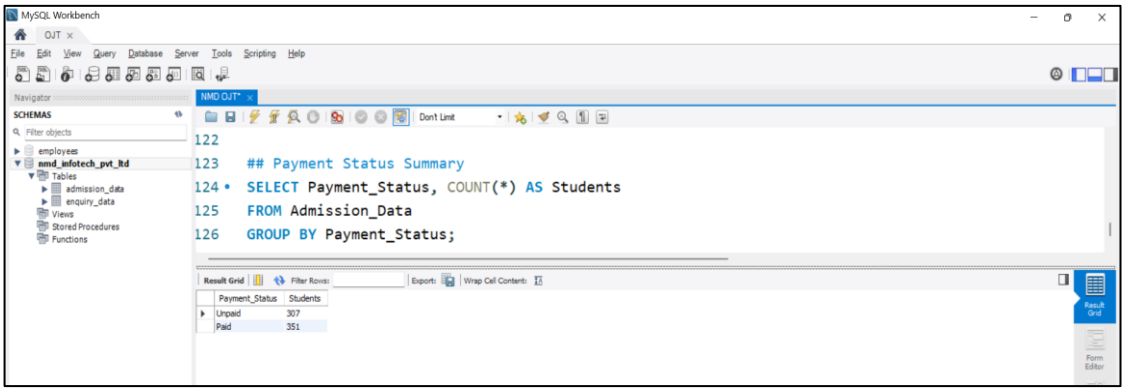

IMAGE NO. 9 Source-wise Revenue Contribution

INTERPRETATION:

Some marketing sources not only generate enquiries but also contribute higher revenue. For example, Google or Instagram may lead to more high-paying admissions compared to other channels. This helps identify the most profitable sources.

IMAGE NO. 10 Payment Status Summary

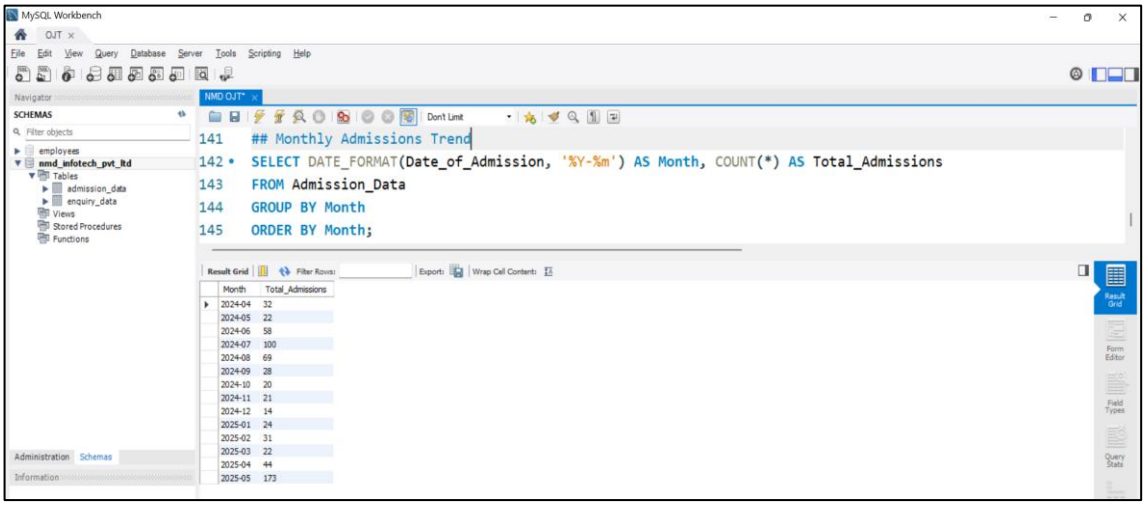

INTERPRETATION:

The payment status shows how many students have fully paid, partially paid or not paid fees. A high number of partially paid students means fee recovery policies should be improved to avoid financial risks.

Payment Status	No. of Students
Unpaid	307
Paid	351

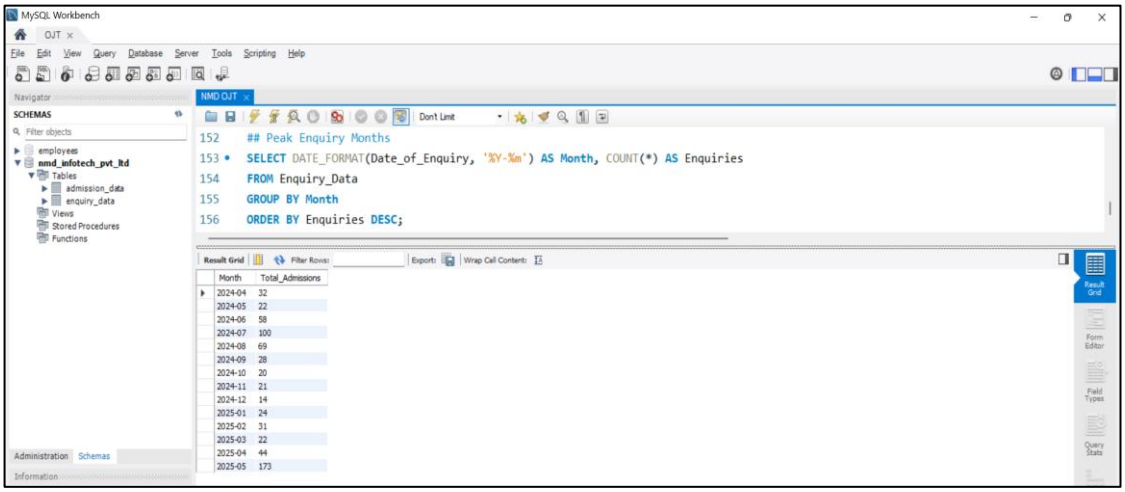

IMAGE NO. 11 Monthly Admissions Trend

INTERPRETATION:

Admissions are not consistent throughout the year. Peaks may happen during certain months (like post-exam results), while other months are slower. This shows seasonal patterns and helps in planning campaigns at the right time.

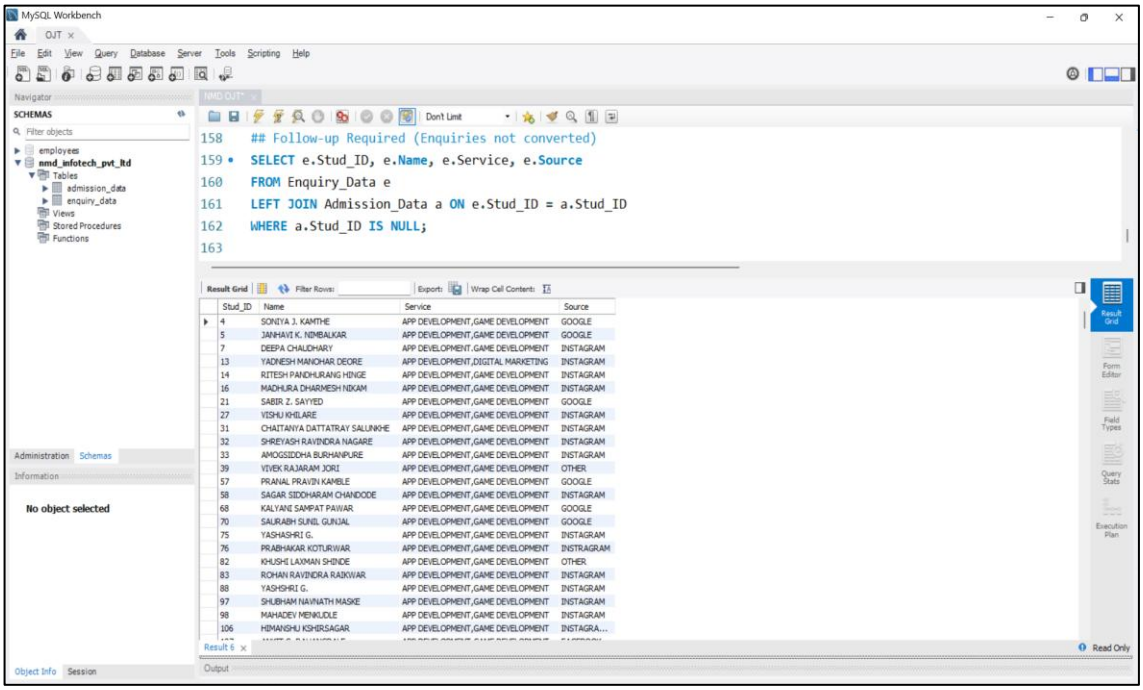

IMAGE NO. 12 Peak Enquiry Months

INTERPRETATION:

Some months see more enquiries than others. If enquiries are high but admissions are not, it means there is a gap in the conversion process. Running offers during these peak months could increase admissions.

IMAGE NO. 13 Follow-up Required (Enquiries not converted)

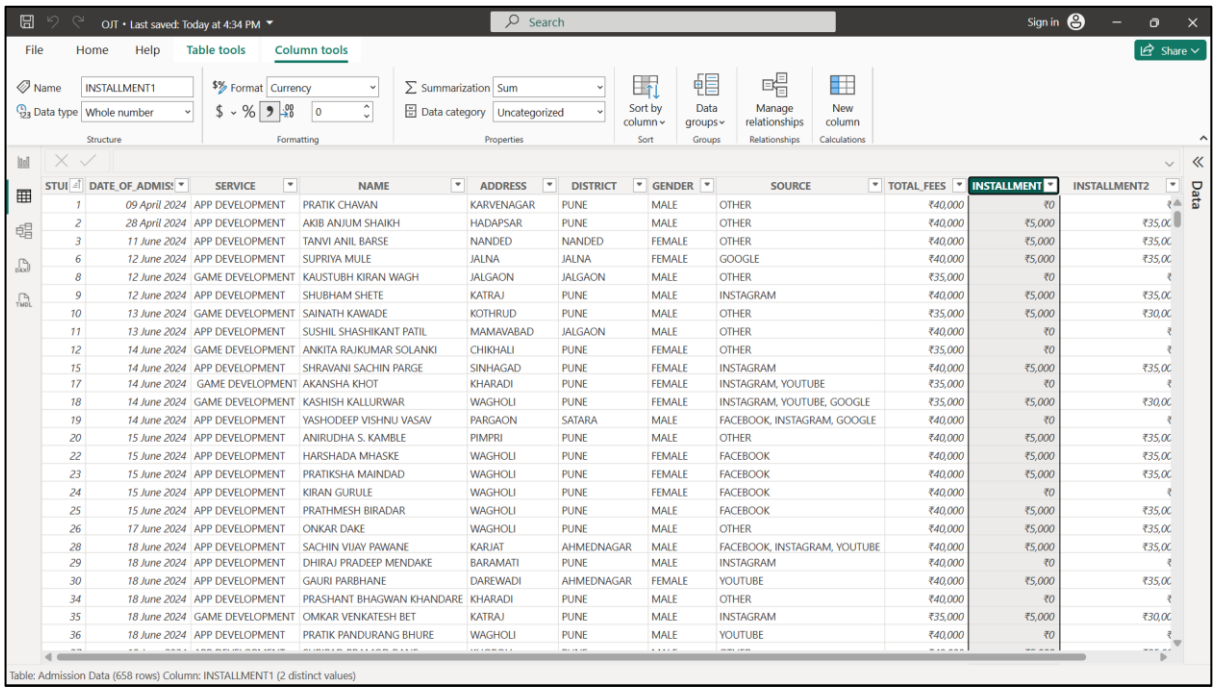

INTERPRETATION:

This shows students who enquired but did not take admission. These are important leads for follow-up, since they already showed interest. Targeted calls, emails, or discounts could still convert them.

2. DATA ANALYSIS THROUGH POWER BI

IMAGE NO. 14 Connect Data with Power BI

- Import Admission_Data.csv and Enquiry_Data.csv into Power BI.

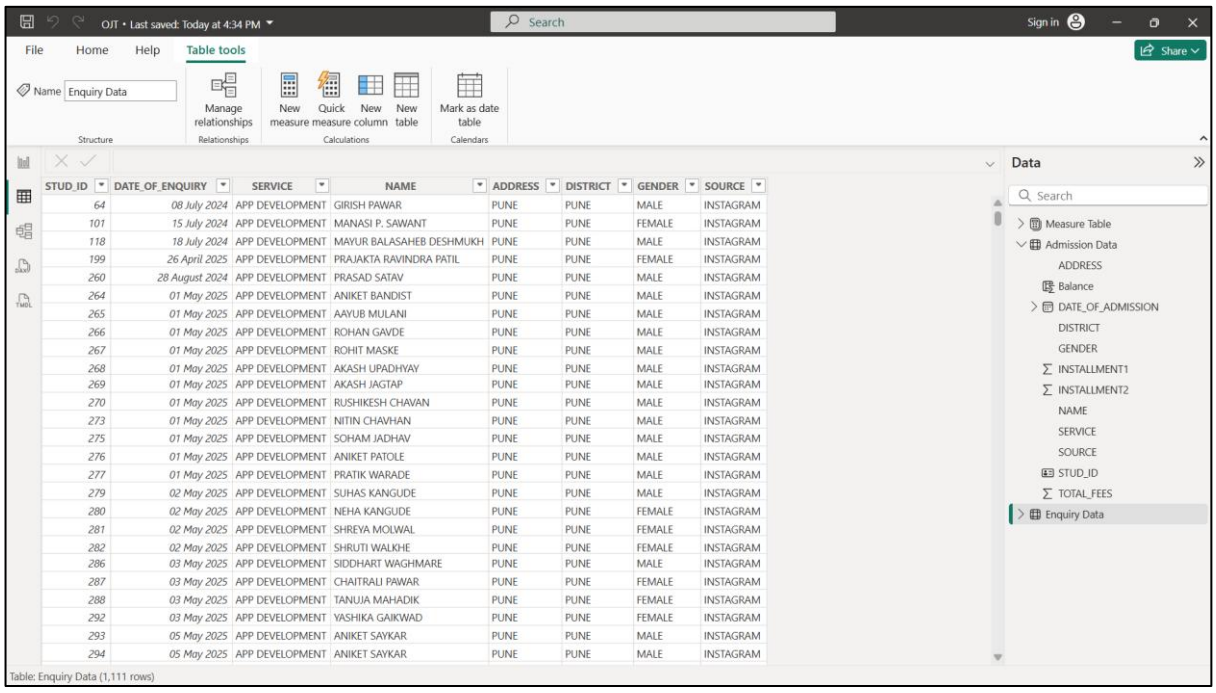

IMAGE NO. 15 Creating New Table “Date Table”

- It was need to create “Date Table” in power bi using DAX.
- This table contain six columns such as “Date, Year, Montha Number, Month Name, Quarter, Week Day”.
- Instead of using scattered date columns (“Date_of_Enquiry” and “Date_of_Admission”), you connect them to one central Date table.
- It is useful to easily create charts like Monthly Admissions Trend, Quarterly Revenue, Year-wise Conversions.
- The Date Table makes your dashboards dynamic, accurate and professional for time-series analysis.

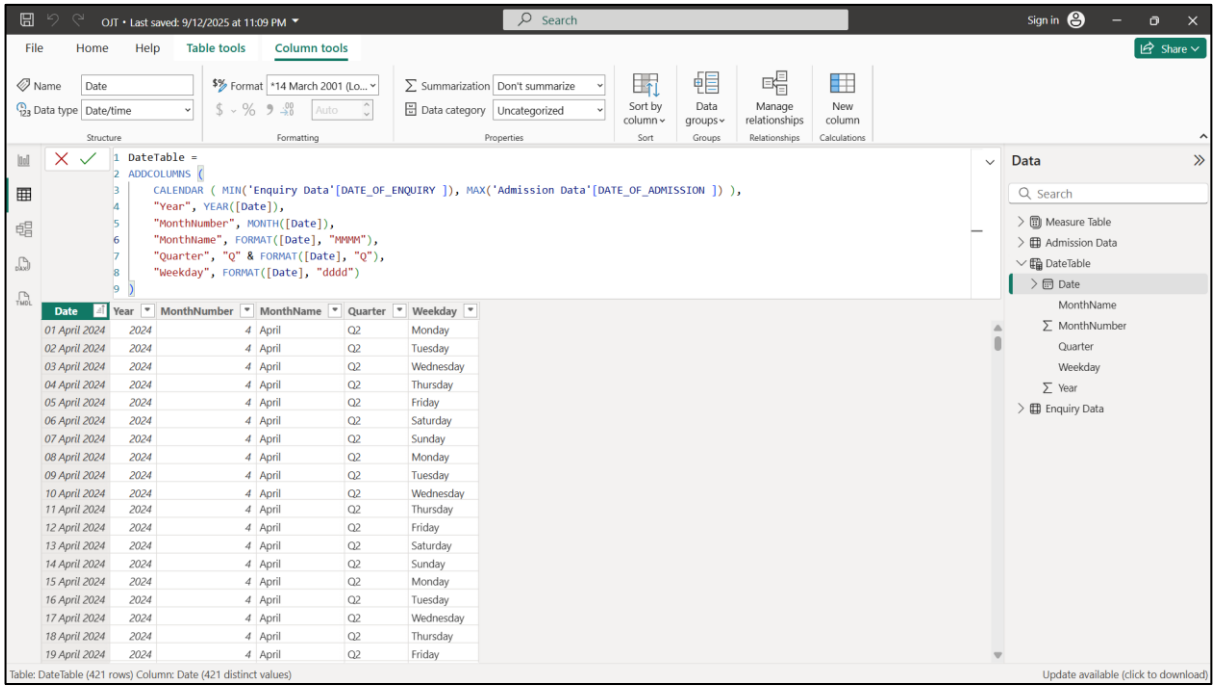

IMAGE NO. 16 Build Data Model

- Tables: Enquiry Data and Admission Data
- Relationship: Enquiry Data [Stud_ID] → Admission Data [Stud_ID] (One-to-Many)

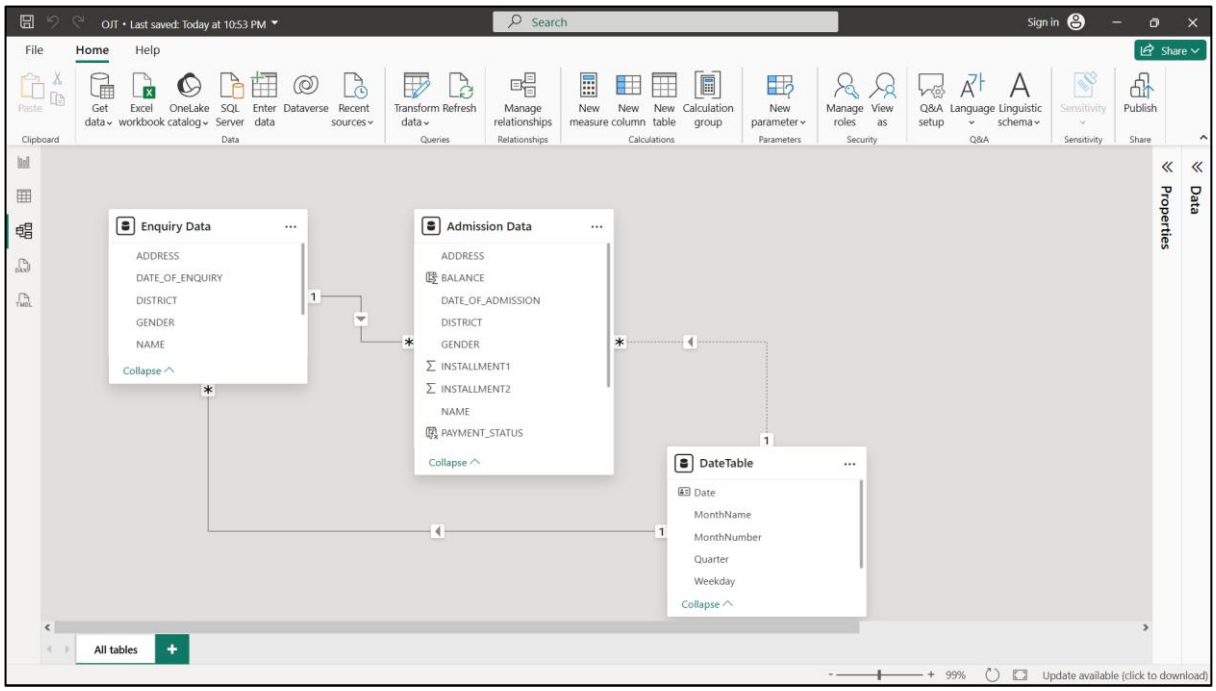

IMAGE NO. 17 Create Measures (DAX)

```
1) Collected Fees = SUM('Admission Data'[Total_Fees]) - SUM('Admission Data'[Balance])
2) Conversion Rate = DIVIDE([Total Admissions], [Total Revenue], 0)
3) Female Admissions = CALCULATE(COUNTROWS('Admission Data'), 'Admission Data'[Gender] = "Female")
4) Male Admissions = CALCULATE(COUNTROWS('Admission Data'), 'Admission Data'[Gender] = "Male")
5) Monthly Admissions = COUNTROWS('Admission Data')
6) Pending Fees = SUM('Admission Data'[Balance])
7) Total Admissions = COUNTROWS('Admission Data')
8) Total Enquiries = COUNTROWS('Enquiry Data')
9) Total Revenue = SUM('Admission Data'[TOTAL_FEES])
```

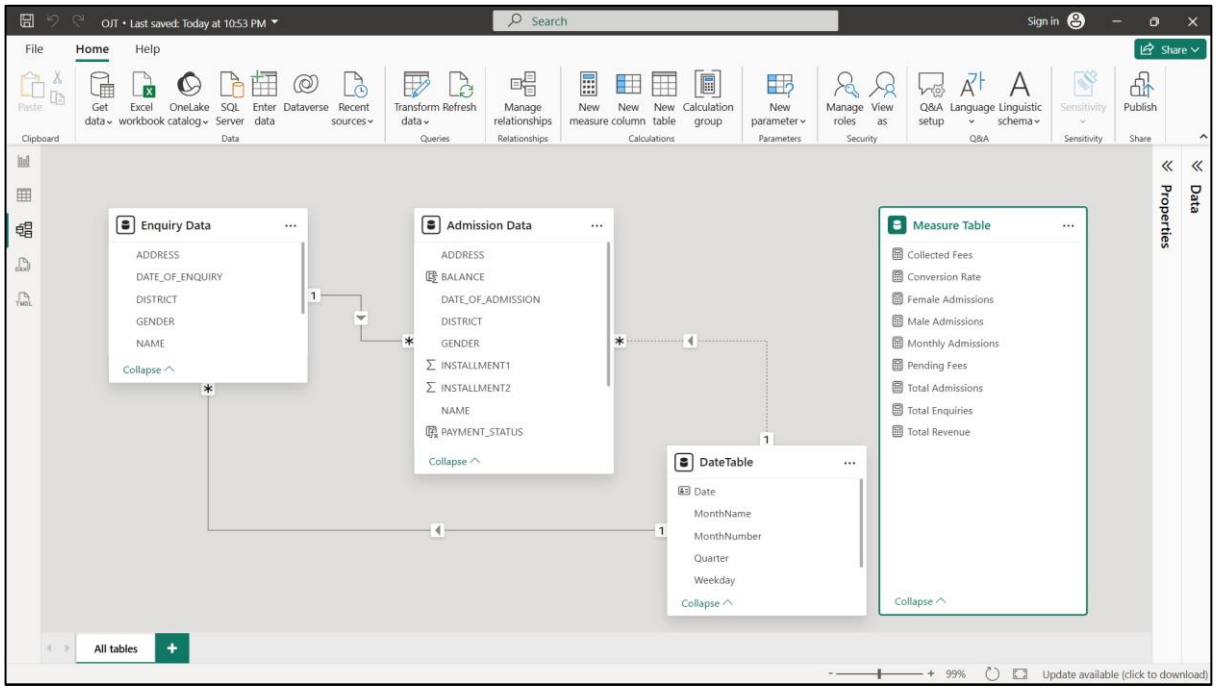

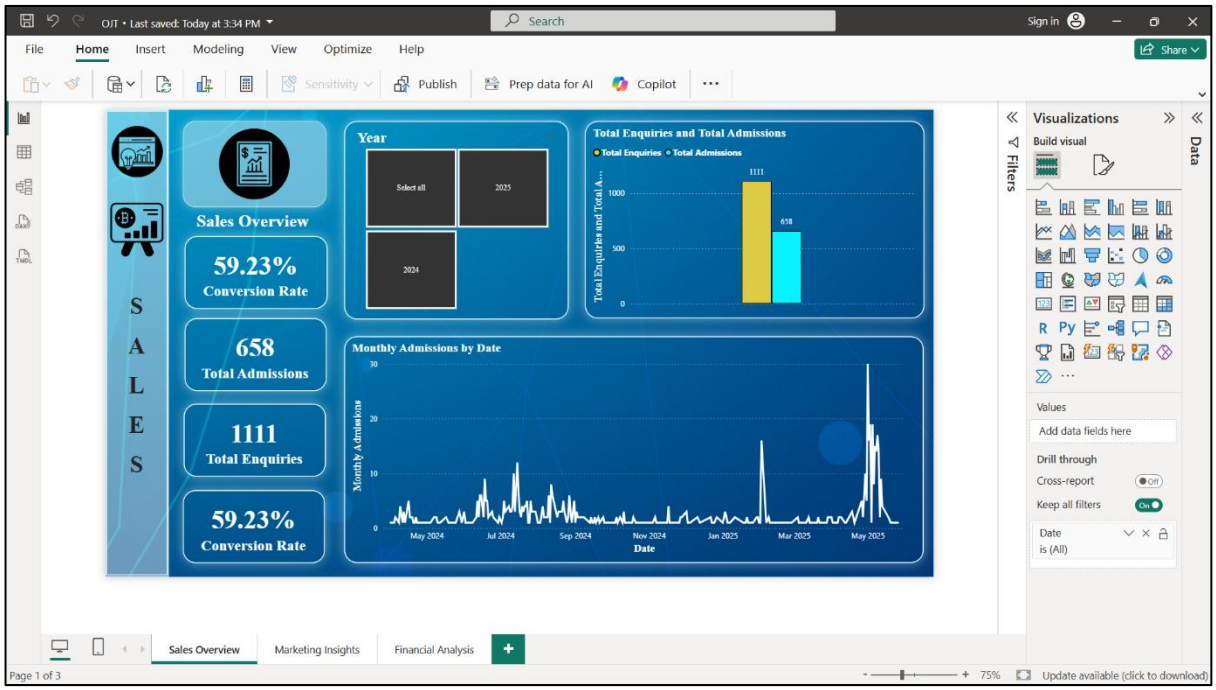

IMAGE NO. 18 'SALES OVERVIEW' DASHBOARD

INTERPRETATION:

This dashboard is like the health check-up of the company's sales process. In short, it shows how many students enquired, how many took admission and what percentage of enquiries converted.

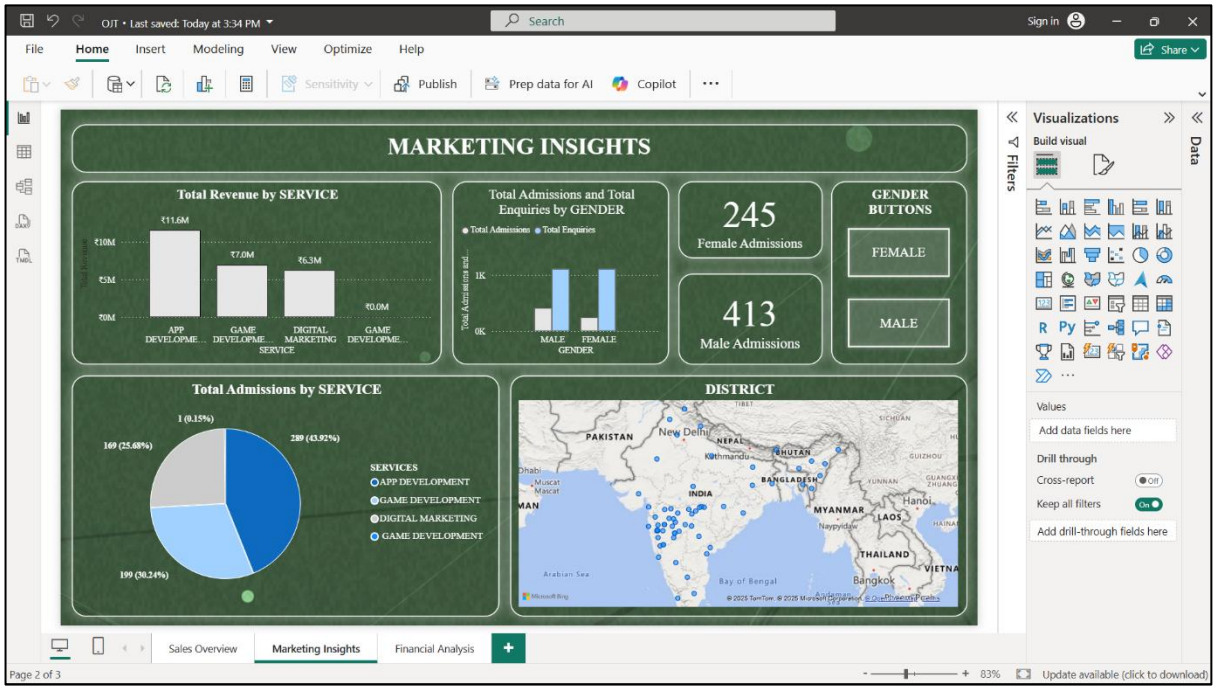

The interpretation here is that NMD Infotech is good at attracting interest, the enquiry numbers are strong. But when we compare admissions, the difference is clear: only a fraction of enquiries is becoming students. This tells us that the problem is not marketing reach, but conversion strategy.

For example, students are curious enough to enquire, but maybe they don't get enough personalised counselling or they are comparing prices with competitors or they drop out because the communication isn't consistent. The trend line of admissions over months also shows the seasonality some months admissions rise (probably after exam results), while others drop.

This dashboard helps management quickly identify two big areas:

1. Awareness is working well (enquiries are high).
2. Conversion needs improvement (gap between enquiries and admissions).

IMAGE NO. 19 “MARKETING INSIGHTS” DASHBOARD

INTERPRETATION:

The visual shows that not all sources are equal. Some platforms, like Google or Instagram, not only bring in more enquiries but also deliver actual admissions. On the other hand, some channels may create enquiries but fail to convert them, which means resources might be wasted there.

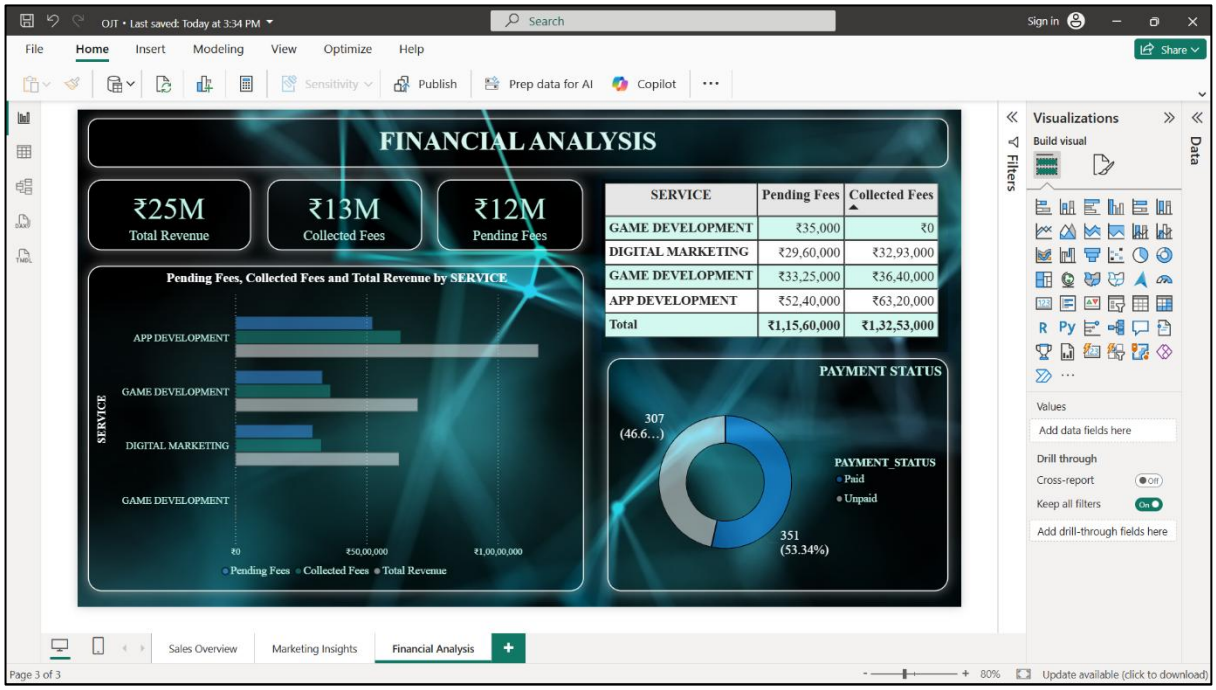

For example, if Instagram is bringing many leads but fewer admissions, the company should dig deeper are these students just browsing? Do they drop off after the first call? On the flip side, if Google enquiries bring fewer leads but most of them convert into high-paying admissions, then Google is a “quality source.”

This dashboard also connects marketing to revenue contribution. It’s not just about how many students came from each source, but how much money they brought in. That’s the real measure of success.

So, the interpretation is:

- Digital channels are performing better than referrals or offline sources.
- Management should invest more in high-conversion, high-revenue platforms.
- Weak channels need rethinking or re-strategizing.

IMAGE NO. 20 “FINANCIAL ANALYSIS” DASHBOARD

INTERPRETATION:

This dashboard is like the finance team’s control room. It shows how much total revenue was expected (based on fees), how much has actually been collected and how much is still pending.

Looking at the visuals, you can see that while the company is generating good revenue, a big portion is stuck in pending balances. This is risky because cash flow is what keeps the company running pending fees affect planning, salaries and growth investments.

The payment status distribution (Paid, Partially Paid, Unpaid) makes this even clearer. A large “Partially Paid” section means many students pay the first installment but delay or skip the rest. This could be due to affordability, lack of follow-up or flexibility in fee structures.

The service-wise breakdown is also important. Some courses may show higher pending balances than others, meaning those services may attract students but struggle with collections. Management can use this to adjust payment policies (e.g., smaller installments, discounts for upfront payments or strict reminders).

So, the interpretation is:

- Revenue generation is strong, but collections are weak.
- A clear gap exists between “promised money” (Total Fees) and “real money” (Collected Fees).
- Unless fee recovery strategies improve, the company risks cash flow issues.

FINDINGS / OUTCOME OF THE PROJECT

FINDINGS / OUTCOME OF THE PROJECT

During this project, I explored enquiry and admission data at **NMD Infotech, Pune**, and analysed it through **SQL queries** and **Power BI dashboards**. The outcomes of the study highlight both strengths and areas for improvement in the company's sales, marketing, and financial operations.

1. **High Enquiries but Low Conversions**

- The company successfully generates a large number of enquiries through its marketing campaigns.
- However, only a smaller portion of these enquiries convert into admissions. This highlights the need for stronger follow-up, counselling and lead nurturing.

2. **Marketing Source Effectiveness**

- Digital channels like Google and Instagram bring in the majority of enquiries and admissions.
- Traditional or referral-based sources contribute less, meaning the company should focus more on strengthening its online presence.

3. **Service-wise Demand**

- Courses such as **App Development** and **Data Science** are the most popular among students.
- Some services show lower admissions, which suggests a need for more promotion or course restructuring.

4. **Revenue Insights**

- Certain courses generate higher revenue, even with fewer admissions, due to premium pricing.
- This shows that financial contribution is not always linked to popularity and the company should balance between high-demand and high-value courses.

5. **Gender and District Trends**

- A noticeable gap exists between male and female admissions, pointing to an opportunity for targeted awareness campaigns.
- Pune contributes the majority of admissions, but nearby districts also show potential for growth and expansion.

6. **Financial Performance**

- While the company generates strong revenue on paper, a significant portion remains pending in the form of balances.
- Many students fall under the “Partially Paid” category, which can create cash flow challenges if not managed well.

7. **Seasonal Patterns**

- Admissions and enquiries show monthly and seasonal variations. Peaks often align with academic cycles, while some months remain slow.
- This pattern allows the company to time its marketing campaigns for maximum impact.

8. **Unconverted Enquiries**

- A large number of enquiries never convert into admissions, which represent missed opportunities.
- These students remain valuable leads for future follow-up and re-engagement.

LEARNING OF THE STUDENT THROUGH THE OJT

LEARNING OF THE STUDENT THROUGH THE OJT

My internship at **NMD Infotech, Pune** as a Business Analytics intern was a highly enriching experience that gave me practical exposure beyond classroom learning. This On-The-Job Training allowed me to understand how data is collected, cleaned, analysed and transformed into meaningful insights that help businesses make decisions.

1. Technical Learning

- I gained hands-on experience with tools such as Excel, SQL and Power BI.
- Learned how to clean raw datasets, remove duplicates and transform unstructured data into useful formats.
- Wrote SQL queries to analyse data, find patterns and generate insights.
- Built Power BI dashboards to visualize data in a way that management can easily understand and act upon.
- Understood the importance of data modelling and relationships between enquiry data and admission data.

2. Business Learning

- I understood how sales and marketing data reflects customer behaviour and business performance.
- Learned how to measure conversion rates, revenue contributions, pending fees and source effectiveness.
- Gained exposure to real business problems such as low conversion rates, pending fee collections and identifying profitable marketing channels.
- Saw how data-driven insights can directly influence decision-making, strategy and future growth.

3. Professional Learning

- Improved my communication skills by interacting with team members and, at times, business clients.
- Learned the importance of time management, attention to detail and accuracy while working with real company data.

- Understood how to maintain confidentiality and ethics while handling sensitive student and financial records.
- Experienced how teamwork, discipline and responsibility are essential in a professional environment.

4. Personal Growth

- The internship boosted my confidence in applying theoretical knowledge to practical business cases.
- I developed a problem-solving mindset instead of just looking at numbers, I started asking “what does this mean for the business?”
- Gained a clear picture of how a career in Business Analytics can shape my future, motivating me to keep learning more advanced tools and techniques.

CONSIDERATION TO FACTORS SUCH AS ENVIRONMENT, SAFETY, ETHICS, COST, PROFESSIONAL (NATIONAL & INTERNATIONAL) STANDARDS

CONSIDERATION TO FACTORS SUCH AS ENVIRONMENT, SAFETY, ETHICS, COST, PROFESSIONAL (NATIONAL & INTERNATIONAL) STANDARDS

During my OJT at **NMD Infotech**, I did not only focus on data analysis but also kept important professional factors in mind:

- **Environment**: I used digital tools (SQL, Power BI, Excel) instead of paper reports. This reduced waste and supported eco-friendly practices.
- **Safety**: The data I worked on had student and fee details. I made sure it was kept safe, private and not shared outside.
- **Ethics**: I worked honestly and respected the confidentiality of company data. My analysis was fair and based only on facts.
- **Cost**: I used the tools already available in the company and avoided suggesting expensive software, keeping it cost-friendly.
- **Professional Standards**: I followed proper ways of handling and presenting data. My work matched both Indian business ethics and global standards in analytics.

CONTRIBUTION TO THE HOST ORGANIZATION

CONTRIBUTION TO THE HOST ORGANIZATION

During my internship at **NMD Infotech, Pune**, I was able to contribute to the company in several meaningful ways:

1. **Data Cleaning & Structuring**

- I helped organize and clean enquiry and admission data, which was earlier scattered and unstructured.
- This made the data easier to use for reporting and decision-making.

2. **SQL-Based Analysis**

- I wrote queries to find insights such as enquiries vs admissions, source-wise performance, gender distribution and revenue patterns.
- These queries gave the company a clearer picture of how their sales and marketing efforts were performing.

3. **Power BI Dashboards**

- I created interactive dashboards that allowed management to track admissions, revenue and marketing effectiveness in real time.
- This saved time for the team and gave them instant access to key business metrics.

4. **Marketing Insights**

- Through my analysis, I identified which platforms (like Google and Instagram) were driving more admissions and revenue.
- This helped the company understand where to invest more in marketing.

5. **Financial Insights**

- My analysis highlighted issues like high pending balances and partially paid students.
- This gave the finance team useful inputs to improve fee collection and payment policies.

6. **Decision Support**

- Overall, my work gave the management **data-driven insights** instead of assumptions.
- This will help the company improve conversions, optimize marketing spending and strengthen financial health.

303- ON THE JOB TRAINING (OJT) PROGRESS DIARY-RECORD

Day & Date	Write against respective date: Description of daily activity /Task undertaken related to your project	Signature of Student	Signature of Mentors
16/06/2025 to 21/06/2025	Orientation & Understanding Business • Attended induction sessions and got an overview of company structure, services, and culture. • Understood the role of a Business Analyst and how it fits into projects. • Studied existing business processes and basic workflows. • Assigned first learning tasks on Excel & SQL.		
23/06/2025 To 28/06/2025	Requirement Gathering & Documentation • Observed client meetings to understand requirement gathering. • Learned how to document business needs in a structured way. • Prepared simple requirement notes and process flows under supervision. • Worked on improving communication and listening skills.		
30/06/2025 To 05/07/2025	Data Collection & Cleaning • Started working with raw datasets provided by the company. • Learned how to clean data using Excel (handling missing values, formatting, consistency checks). • Understood the importance of data quality in business analysis. • Documented data challenges and possible solutions.		
07/07/2025 To 12/07/2025	SQL Queries & Database Understanding • Hands-on practice with SQL basics (SELECT, WHERE, GROUP BY, JOINS). • Worked on retrieving data from company databases. • Created small reports using SQL queries. • Learned how databases are connected to business intelligence tools.		
14/07/2025 To 19/07/2025	Exploratory Data Analysis • Performed descriptive analysis (counts, trends, averages, distributions). • Identified patterns in customer data (e.g., peak periods, popular services). • Presented weekly findings to mentor. • Started learning how to transform data into visual insights.		

21/07/2025 To 26/07/2025	Power BI Basics • Got introduced to Power BI dashboards. • Learned how to import datasets into Power BI. • Created simple charts (bar, line, pie) for practice. • Understood how KPIs can be visualized for better decision-making.		
28/07/2025 To 02/08/2025	Advanced Analysis & Visualization • Applied DAX measures (e.g., totals, percentages, ratios). • Built interactive dashboards with filters and slicers. • Compared performance across different categories (services, regions, etc.). • Shared first draft dashboard with supervisor for feedback.		
04/08/2025 To 09/08/2025	Business Insights Development • Translated data patterns into business insights. • Prepared reports on marketing channel effectiveness and customer preferences. • Learned to focus on *why* the data shows certain trends, not just *what* it shows. • Assisted team in preparing client-facing presentations.		
11/08/2025 To 16/08/2025	Client Interaction & Feedback • Joined client discussions to understand their expectations. • Presented parts of analysis and received feedback. • Improved confidence in explaining data-driven insights. • Worked on refining dashboards based on real business needs.		

Director, SBS
